Bladder Cancer in the United States

National trends and state-level patterns from GBD 2021 (1980–2021)

Study design

Global Burden of Disease 2021

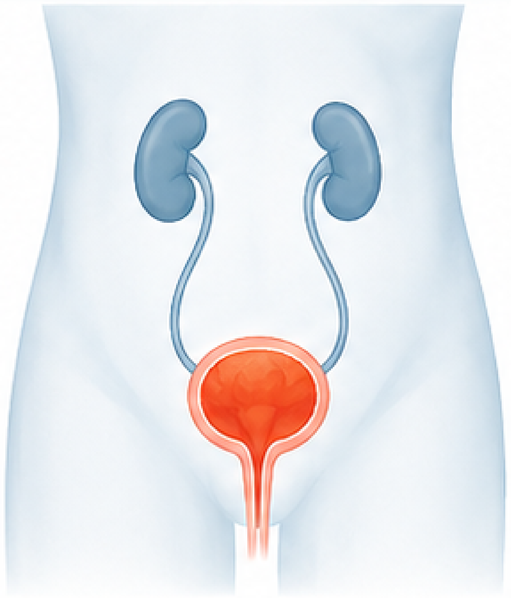

1980–2021

All 50 states + DC

Outcomes: incidence, prevalence, mortality, YLDs, YLLs, DALYs

YLDs = years lived with disability;
YLLs = years of life lost;
DALYs = disability-adjusted life years.

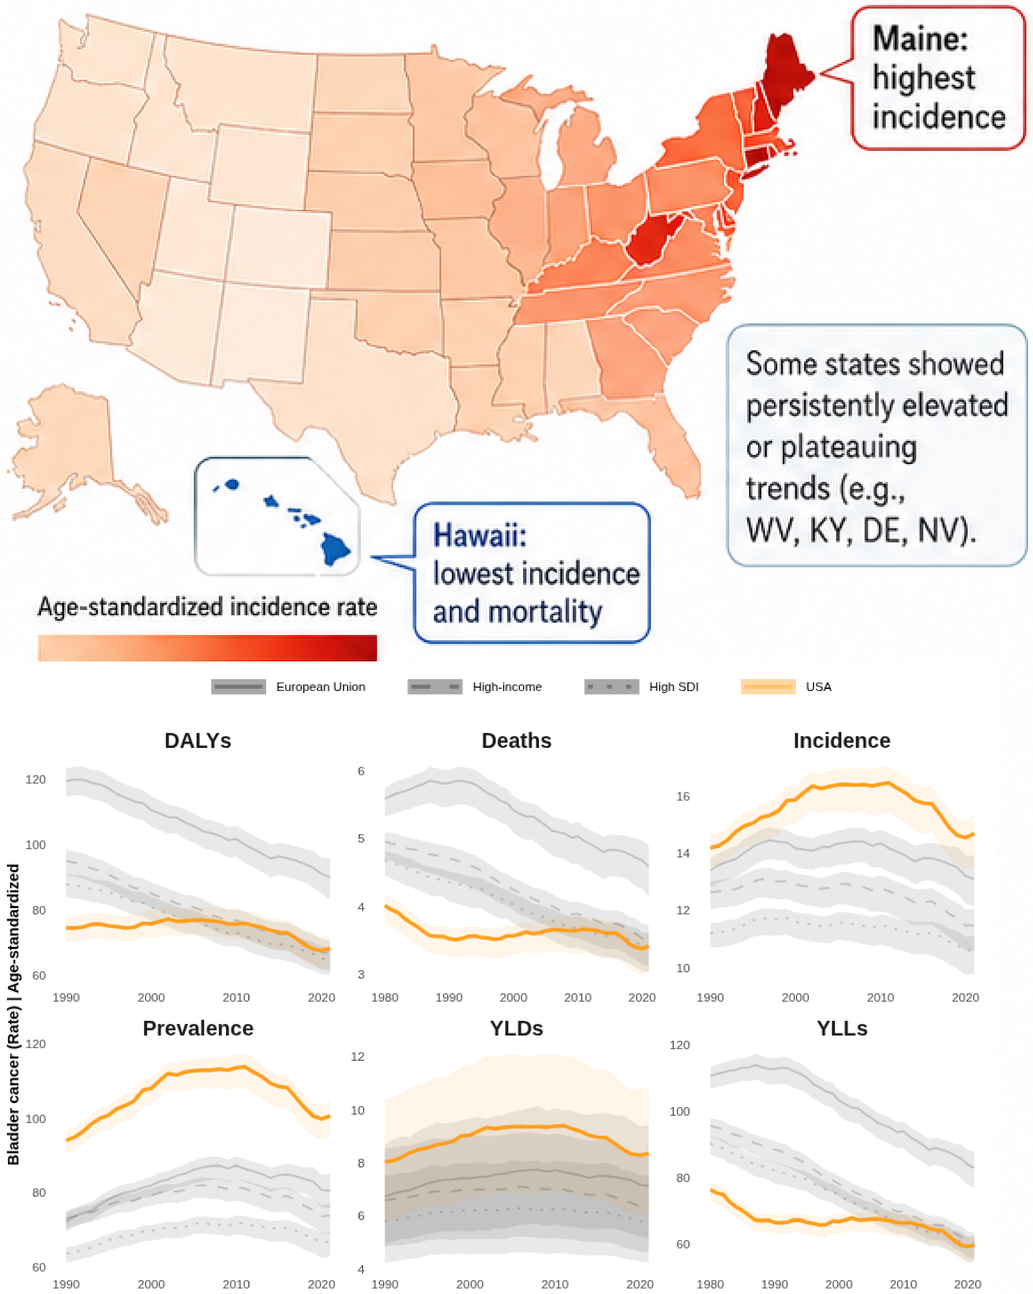

Key findings

Men had consistently higher burden
Across all measures and age groups

Highest rates in older adults
Peak burden in ages 75–79 and 80+

Where is the burden highest?

Bladder cancer remains a substantial and uneven burden across the U.S., supporting targeted prevention, earlier detection, and more equitable access to care.
